PROJECT RAPORT:

Project:Skill Exchange Platform

1. Introduction:

The Skill Exchange Platform is a web-based application designed for students and professionals. The main idea is to allow users to swap knowledge without money. For example, a user can teach "Web Development" in exchange for learning "Photography."

2. Project Goals:

Create a user-friendly interface for skill sharing.

Build a secure system for user registration and login.

Manage a real-time database to store user profiles and skills.

Ensure the website works perfectly on both computers and smartphones.

3. Tech Stack (Tools Used)

Frontend: HTML5, CSS3, and JavaScript.

Backend: Node.js and Express.js.

Database: MongoDB Atlas (Cloud Database).

Design: Responsive Design for mobile compatibility.

4. Team Members & Responsibilities:

Name	Role	Main Tasks
Razane	Project manager	Project structure and lnking pages.
Douha	Front-End Developer	Login, Register, and Dashboard pages.
Wafaa	CSS & UI Developer	Styling and Responsive Design.
Ilyas	Back-End Developer	API, Login system, and CRUD logic.
Habiba	Database & Report	MongoDB setup and Documentation.

5. System Features:

Authentication: Users can create accounts and log in securely.

Skill Management: Users can add, view, update, or delete the skills they offer (CRUD).

Database Connection: All data is stored safely in the cloud using MongoDB Atlas.

Responsive UI: The layout adapts to any screen size.

6. Conclusion:

Our project Skill Exchange is a modern solution for collaborative learning. We built it using a Full-Stack approach (Frontend, Backend, and Cloud Database) to ensure a seamless user experience. The platform is highly beneficial because it removes the financial barriers to education, allowing anyone to gain new skills through a fair exchange system. By connecting people directly, our website helps build a supportive community where knowledge is shared freely and efficiently.
